Research on Food and Agriculture is progressively moving towards an interdisciplinary study of sustainable food production to meet the demand of growing human populations. However, as more countries industrialize, there is an increase in air and water pollution, soil contamination, as well as elevated levels of global warming and depletion of the ozone layer. This complex scenario challenges researchers to develop and test more appropriate technologies for sustainable agriculture. Research, for example, is being carried out to overcome problems of environmental stress, minimize the use of pesticides, slow post-harvest storage losses, and explore nutrition, animal science and human nutrition or human health, by using conventional and new technologies such as biotechnology, mutation-assisted breeding and molecular biology.

The Journal of Food, Agriculture and Environment (JFAE) is dedicated to meet the need for a new journal that can encompass this wide range of topics and interdisciplinary approaches. JFAE will publish (in print and on-line versions) peer-reviewed original research, protocols, critical reviews or short communications in food science and technology, and agriculture or environment, with particular emphasis on interdisciplinary studies on food, human nutrition, agricultural and animal science or/and environment. For advice or more information, please contact the editorial Office.

The members of the International Society of Food, Agriculture and Environment - ISFAE will receive JFAE at the reduced rate. For more information, kindly visit our website: www.isfae.org or contact the ISFAE- Secretariat.
